

Arc Length and Circumference of Circles HW

Formula for arc length: $S = \frac{n}{360} \cdot C$ (C = circumference) or

$$S = \frac{n}{360} \cdot 2\pi r \text{ (when given radius)} \quad \text{or} \quad S = \frac{n}{360} \pi d \text{ (when given diameter)}$$

where: S – arc length
r – radius of a circle
n – degrees in a central angle

I can calculate the circumference AND an arc length of a circle. Shade in the given arc before calculating.

Find the arc length and circumference for each question. KEEP ALL ANSWERS IN TERMS OF PI.

1. \widehat{AB}

2. \widehat{CDE}

3. \widehat{FH}

C = _____ Length = _____ C = _____ Length = _____ C = _____ Length = _____

Directions: Follow the given instructions below.

4. Find $m\widehat{AB}$.

5. Find $m\widehat{XY}$.

6. Find $m\widehat{MN}$.

7. Find the radius.

8. Find $m\angle ABC$.

Find the arc length of the given arc below. Keep your answers in terms of pi.

9.

10.

11.
