Trig: Ratios, Angles and Sides In-Class Practice

1. Consider the triangle ABC, shown below. Use the Pythagorean Theorem to find the missing side. Then find all trig ratios below and simplify all answers.

$$\sin \angle A = \frac{7}{25}$$

$$\cos \angle A = \frac{24}{25}$$

$$\tan \angle A = \frac{7}{24}$$

$$x = 25$$

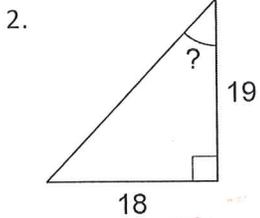

$$\begin{aligned} 24^2 + 7^2 &= x^2 \\ 576 + 49 &= x^2 \\ \sqrt{625} &= \sqrt{x^2} \\ 25 &= x \end{aligned}$$

$$\sin \angle B = \frac{24}{25}$$

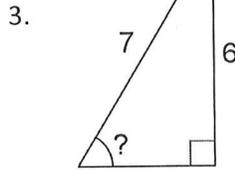

$$\cos \angle B = \frac{7}{25}$$

$$\tan \angle B = \frac{24}{7}$$

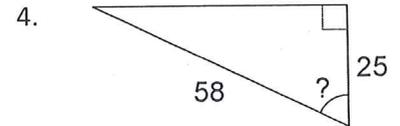

Find the missing angle measures.

$$\begin{aligned} \tan \theta &= \frac{18}{19} \\ \theta &= \tan^{-1}\left(\frac{18}{19}\right) \\ \theta &= 43.45^\circ \end{aligned}$$

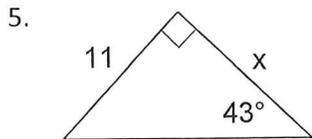

$$\begin{aligned} \sin \theta &= \frac{6}{7} \\ \theta &= \sin^{-1}\left(\frac{6}{7}\right) \\ \theta &= 59.00^\circ \end{aligned}$$

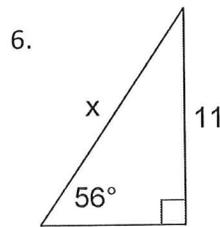

$$\begin{aligned} \cos \theta &= \frac{25}{58} \\ \theta &= \cos^{-1}\left(\frac{25}{58}\right) \\ \theta &= 64.47^\circ \end{aligned}$$

Find the missing sides.

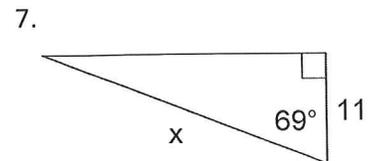

$$\begin{aligned} \tan 43 &= \frac{11}{x} \\ x \tan 43 &= 11 \\ \frac{x \tan 43}{\tan 43} &= \frac{11}{\tan 43} \end{aligned}$$

$$x = 11.80$$

$$\begin{aligned} \sin 56 &= \frac{11}{x} \\ x \sin 56 &= 11 \\ \frac{x \sin 56}{\sin 56} &= \frac{11}{\sin 56} \end{aligned}$$

$$x = 13.27$$

$$\begin{aligned} x \cos 69 &= \frac{11}{x} \cdot x \\ x \cos 69 &= 11 \\ \frac{x \cos 69}{\cos 69} &= \frac{11}{\cos 69} \end{aligned}$$

$$x = 30.69$$
